

MANUPLASTER

Device for processing BIGUMA®- Plast

Description

The MANUPLASTER is a hand-guided device for mechanical installation of our cold-applied seam bonding agent BIGUMA®- Plast.

This device allows BIGUMA®- Plast to be applied quickly and efficiently on centre seams and other seam flanks during "hot" on "cold" asphalt installation. When constructing and developing the device, attention was paid to the use of simple components and standard parts, so as to enable problem-free care and maintenance. That makes the MANUPLASTER ideally suitable for routine application on construction sites.

Application

The seam bonding agent BIGUMA®- Plast can be applied using the guided nozzle or optional hand lance, thereby ensuring really easy and convenient operation. The MANUPLASTER comes with a special pump and sturdy 4-stroke engine, making it perfect for 30 kg packaging. The bypass with pressure relief valve prevents pressure peaks from occurring, which would otherwise cause damage and dirt contamination.
