Innovative Joint Tape

BIGUMA[®]-Hakenband

BIGUMA[®]-Hakenband

The major success driver of our company, as a leading manufacturer of bituminous road construction products, is the development of new, improved product solutions for our customers.

BIGUMA[®]- Hakenband combines a novel shape with the efficient flow characteristics of our BIGUMA[®]- products.

The result: an innovative joint tape that offers numerous benefits.

The cut-to-size 5 mm-thick hook at the top profile edge ensures that the joint tape snugly fits into the cut asphalt surface without slipping off, and thus provides for easy and fast installation.

The firm hold is ensured by a self-adhesive bitumen adhesive layer strip, which, after the melting process, forms a homogenous bituminous compound without any residues with the joint tape.

In addition, the upper profile edge of the joint tape determines the proper installation height in accordance with ZTV-Asphalt.

Moreover, the hook ensures optimal material distribution to the cold side, producing a rivet head, which reliably seals the joint without leaving any unnecessary excess material after the rolling process. BIGUMA[®]- Hakenband is a secure and neat joint sealant.

Your benefits at a glance:

- cut-to-size shape provides for secure positioning during installation
- self-adhesive layer strip ensures easy installation
- the upper profile edge with hook determines the proper installation height in accordance with ZTV-Asphalt
- secure and neat sealing of asphalt surface joints without excess material
